Abstract

An important task within the CORENet project is the identification and collection of the SFSC business models. This activity starts with the identification of SFSC models based on academic literature review, including good practices published on EU projects and platforms, and by project partners and advisors located in the same region or country. The consortium partners and local SFSC advisors collect relevant information that complies with the Nomination Handbook and SFSC evaluation form requirements provided by Task 3.1. The SFSC models identified and described based in the Nomination Form are collected in the SFSC models' inventory, which one will be regularly updated. There is a planned repository on the CORENet website where readers will access the relevant information about Practice abstracts. The collection of Gold Cases is constantly monitored. The aim of the task is to ensure that the 30 Golden Cases adopted provide as broad a picture as possible of the various SFSCs business models and the advisory practices and services associated with SFSCs. A Road map will be established for the Golden Case collection task to be carried out during the project.
